Internal Transfers

Odoo 19 Enterprise · Inventory

Internal transfers move stock between locations within your warehouse – between storage areas, to quality control, or between warehouses.

1 Create an internal transfer

Inventory → Operations → Transfers → **NEW**

Click New to create a transfer. Set the operation type to Internal Transfer, select source and destination locations, add products and quantities, then validate.

TRANSFER FIELDS

Operation Type *	Internal Transfer for moves within the warehouse.
Source Location *	Where the goods are coming from.
Destination Location *	Where the goods are going to.
Scheduled Date	When the transfer is planned.

2 Common use cases

Typical internal transfers: moving goods from a receiving area to bulk storage after inspection, transferring finished goods from production to the finished goods warehouse, relocating slow-moving stock to a separate location, or moving goods between two warehouse buildings on the same site.
