Reporting

Odoo 19 Enterprise · Inventory

Inventory reporting tracks stock levels, movements, and valuation.

1 Stock valuation

[Inventory](#) > [Reporting](#) > [Valuation](#)

The stock valuation report shows the current on-hand quantity and value for every product. The value uses the product's costing method: Standard Price (fixed), Average Cost (AVCO), or First In First Out (FIFO). Export to spreadsheet for balance sheet reconciliation with accounting.

2 Inventory analysis

[Inventory](#) > [Reporting](#) > [Inventory Analysis](#)

Shows all stock moves over a selected period with product, quantity, source and destination locations, and date. Use this to trace the history of a specific lot number, investigate a stock discrepancy, or analyse movement patterns for a product.
