Maintenance Overview

Odoo 19 Enterprise · Maintenance

The Maintenance module tracks equipment, schedules preventive maintenance, and manages corrective maintenance requests — keeping assets running and downtime low.

1 What Maintenance does

Maintenance

Maintenance tracks your company's physical assets — machines, vehicles, office equipment — and manages both planned (preventive) and unplanned (corrective) maintenance activities. It connects with Manufacturing for production equipment downtime and Inventory for spare parts management. Every maintenance activity is logged for cost tracking and compliance.

2 Equipment vs Maintenance Requests

Equipment records store asset details, maintenance history, and scheduled tasks. A Maintenance Request is a specific job to be done on a piece of equipment — either planned in advance (preventive) or triggered by a breakdown (corrective). Equipment can have many requests over its lifetime.
