Planning Overview

Odoo 19 Enterprise · Planning

The Planning module schedules employee shifts and allocates people to projects or tasks over a timeline – providing visibility into resource availability and workload.

1 What Planning does

Planning

Planning gives managers a Gantt-style view of who is doing what and when. You can schedule shifts, assign employees to projects for specific date ranges, and identify capacity gaps. It connects with Timesheets to compare planned vs actual hours, and with the employee's working schedule for accurate availability calculation.
