## Sign Overview

Odoo 19 Enterprise · Sign

The Sign module enables electronic document signing — send contracts, NDAs, offer letters, or any PDF for digital signature without printing.

### 1 What Sign does

#### Sign

Sign lets you send any PDF document to one or more signatories for electronic signature. Recipients receive an email with a link, open the document in their browser, and sign by typing, drawing, or uploading their signature image. The signed document is returned with a certificate of authenticity. Completed documents are stored in Sign and can be linked to customer, employee, or contract records.
