## Skills Management Overview

Odoo 19 Enterprise · Skills Management

---

Skills Management catalogues employee competencies – what your team can do, at what level – enabling resource planning, training identification, and succession planning.

### 1 What Skills Management does

Skills Management is not a standalone module – it is a feature within the Employees module. It provides a structured way to record and track skills across your workforce. Each employee has a Skills section on their Resume tab listing competencies with type, skill, and level. Search across all employees for specific skills to find the right person for a project or identify gaps.
