## Creating Apps

Odoo 19 Enterprise • Studio

Build a simple custom app from scratch with Studio.

### 1 New app from Studio

Studio → New App

Click New App in Studio. Give it a name and icon. Studio creates a new menu item, a new model (database table), and basic views (form, list, Kanban). Add fields to the form to define what the app stores. Customise the list view to show the most relevant columns. Configure access rights to control who can see the app.

**When to use** Studio apps are ideal for simple tracking needs – asset registers, meeting logs, employee surveys, compliance checklists. For anything requiring complex formulas, integrations with external systems, or custom business logic, ask your BPC consultant to build a proper module instead.
